MooreVIEW × Nexcomm Systems — Partnership Discussion Document

Purpose: Working brief for executive alignment and a **Memorandum of Understanding (MOU)** between **Nexcomm Systems** (field hardware, cellular, Nexus Cloud ingest) and **mooreVIEW / The Purple Standard** (process software, PdM, AI, CMMS, fleet HMI).

Status: Discussion draft · **Generated:** 2026-07-26

PDF: Run `npm run build:nexcomm-partnership-mou-pdf` **End state:** Signed MOU → pilot → commercial framework → co-branded go-to-market

Related implementation: `lift_station_epi` template · `ace-liftpoint-fleet` project · Putnam County cloud pilot · `starts_analytics` PdM

1. Executive summary

Nexcomm and mooreVIEW serve the **same wastewater lift customer** from different layers of the stack. Nexcomm wins on **rugged hardware, SIM lifecycle, and cost-effective cloud ingest**. mooreVIEW wins on **proactive operations** — PdM, integrated CMMS, portable projects, and AI that turns telemetry into **scheduled work before overflow**.

Together they replace the reactive loop (autodialer → emergency truck) with **monitoring-contract economics** — without Nexcomm rebuilding SCADA or mooreVIEW rebuilding cellular gateways.

Today	Joint offer
Nexus Cloud = alerts + basic trends	mooreVIEW = fleet HMI, PdM → CMMS, compliance evidence
Custom panel projects per job	Standard <code>lift_station_epi</code> + <code>.est</code> on every install
Operators outgrow “clunky SCADA”	Same Nexcomm hardware; upgraded process layer
mooreVIEW greenfield IoT-Link ramp	Instant scale on 2,000+ LiftPoint Light installed base (ACE alone)

Proposed MOU outcome: Nexcomm remains **system of record for field** → **Azure** (IoT Hub, Cosmos hot tier, ADLS lake). mooreVIEW becomes the **recommended process layer** for lift monitoring — co-sold, co-branded, revenue-shared — with ACE Septic & Waste as the **reference operator fleet**.

2. Parties and channel context

Party	Role
-------	------

Nexcomm Systems	LiftPoint Light / LiftPoint / EPI / Nexus Panel hardware; CAT-M1 cellular; Nexus Cloud (Azure); panel-builder channel
mooreVIEW (The Purple Standard)	ST runtime option, HMI, historian interface, Parc fleet, PdM/AI, CMMS, portable .est projects, cloud SaaS
ACE Septic & Waste	Flagship field operator; septic/lift/electrical licenses; ~ 2,000+ LiftPoint Light monitored lifts in Florida; 24/7 dispatch
Panel builders / utilities	Nexcomm existing channel; Putnam County–class municipal fleets

ACE is not a passive logo — it is **install capacity, certified operator of record, and the first bulk conversion** under any Nexcomm–mooreVIEW MOU.

3. Strategic fit (why partner, not compete)

3.1 Marketplace thesis (shared)

Both parties address operators who cannot afford full municipal SCADA but **cannot afford SSO either**:

- **See** — Nexcomm I/O + cellular + cloud pipe
- **Know** — mooreVIEW trends, PdM health index, starts/amp analytics
- **Act** — mooreVIEW CMMS proactive work orders
- **Prove** — service history + lake-backed reports for compliance (Florida Rule 62-604.500, Largo Ordinance 2010-27, etc.)

mooreVIEW’s published competitor displacement list explicitly names **NexComm Systems** as a target for operators seeking a **standard kit** — partnership converts displacement into **channel revenue** for both sides.

3.2 Division of labor

↓

OPERATOR — ACE, utilities, panel builders, property managers
Monitoring contract • planned routes • regulatory logs

3.3 What each party should **not** build

Nexcomm should not...	mooreVIEW should not...
Rebuild PdM, RUL, CMMS	Replace LiftPoint hardware or SIM ops
Compete with Ignition/VTScada on analytics	Duplicate Cosmos + full-rate Mongo for all pens
Own field-service dispatch	Own panel UL listing / manufacturing

4. Technical integration (current state)

4.1 Device coverage

Product	mooreVIEW profile	Integration track
LiftPoint Light	liftpoint_light	Track A — MQTT /devices/<serial>/messages/events/
LiftPoint / EPI	epi_master	Track A now; Track B MV-ST-OEM on OpenWrt (future)
Nexus Panel / WWTP dialer	Custom / EPP	Phase 2

4.2 LiftPoint Light telemetry (AI-relevant fields)

Source	mooreVIEW tag	AI use
in3_starts / in4_starts	P1_STARTS / P2_STARTS	starts_analytics — all units
in3_runtime / in4_runtime	P1_RUNTIME_HRS / P2_RUNTIME_HRS	Runtime/start creep
Reg 9070 / 9080	AI1 / AI2	run_amps_creep — CT-equipped subset
Floats + pump run	LVL_*, P*_RUN_FB	Short-cycle, alternation, ghost starts
s1p1_total_1hr_flow	P1_FLOW_1HR_GAL	Efficiency / I&I context

Key insight: ~50% of ACE fleet may lack CT wiring, but **every LiftPoint Light reports onboard start counters** — enabling fleet PdM at scale without truck rolls.

4.3 PdM tiers (productized)

Tier	Hardware	mooreVIEW methods	List add-on
Monitor	Any LiftPoint Light	Alarms, trends, CMMS reactive	Base renewal \$25/mo
Predict — Starts	All units	starts_analytics	Included in base (MOU differentiator)
Predict — Electrical	CT-installed	+ run_amps_creep	+\$5–10/mo
Predict — Premium	EPI triplex + ONNX path	Edge/host MCSA	+\$10/mo · phase 2

4.4 Pilots in repo

Pilot	Sites	Purpose
Putnam County	6 (1× EPI, 5× LiftPoint)	Municipal fleet MQTT + Nexus register map
ACE scaffold	8 sample + CSV for 2,000+	Bulk import, PdM asset map, ace-liftpoint-fleet.est.json

Regenerate ACE artifacts: `npm run generate:ace-fleet`

5. Installed-base opportunity — ACE + Nexcomm

5.1 Scale

Metric	Directional value	Source
LiftPoint Light installed (ACE + Nexcomm)	2,000+	Field estimate · Jul 2026
ACE CT-equipped subset	~ 50% (planning assumption)	Commissioning mix
Starts-only PdM addressable	~ 1,000+	No CT required
Florida lift stations (ACE service area)	Multi-county	Hillsborough, Pasco, Hernando, Polk, Pinellas, etc.

5.2 Operator value (ACE)

ACE already sells:

- Remote monitoring on maintenance plans
- 24/7 human response (not passive SMS)

- Licensed septic + electrical + plumbing + CB — **one vendor for WO closure**

mooreVIEW adds:

- **Proactive PM work orders** before high-level alarm
- Fleet view across 2,000 lifts
- Evidence pack for **monthly inspection logs** (5-year retention)
- Differentiation vs dialer-only competitors during **Data Flow / Badger** transition

6. Financial model (directional)

Not audited forecasts. Based on mooreVIEW Pricing Guide v2.4, Product Market Entry v1.4, Wastewater Business Plan, and ACE installed-base estimate.

6.1 Unit economics — single duplex lift (list)

Line item	mooreVIEW list	Notes
One-time (new greenfield)	\$2,500	Often \$0 on ACE retrofit — hardware already installed
Monitoring renewal	\$25/mo (\$300/yr)	Includes Parc, historian access, CMMS, base PdM
Cell (mooreVIEW-managed)	\$3/mo	Often Nexcomm-bundled on existing SIM — pass-through or split
PdM premium (CT / MCSA)	+\$5–10/mo	Optional upsell
Steady-state recurring	\$28/mo (\$336/yr)	With mooreVIEW-managed cell

Software gross margin (mooreVIEW mature target): 75–85%

Hardware gross margin (Nexcomm industry typical): 35–45% on new box sales

6.2 Scenario A — ACE installed-base conversion (2,000 lifts)

Assumes **software-only attach** on existing Nexcomm hardware (no new capex).

Penetration	Subscribing lifts	mooreVIEW gross renewal/yr	@ \$25/mo list
Year 1 — 10%	200	\$60,000	Pilot counties
Year 2 — 35%	700	\$210,000	Florida expansion
Year 3 — 60%	1,200	\$360,000	+ PdM premium attach
Year 5 — 80%	1,600	\$480,000	Mature ACE fleet

With PdM premium on 40% of CT sites (+\$7.50/mo blended): add ~\$46K/yr at 1,600 lifts.

ACE dispatch / service revenue (operator, not mooreVIEW): Industry typical emergency lift call **\$800–2,500**; avoided SSO events and contracted PM routes are the **operator ROI** — mooreVIEW enables ACE to **sell monitoring contracts**, not just emergency response.

6.3 Scenario B — Nexcomm net-new sales (co-branded bundle)

Every new LiftPoint Light sold through panel builders with **mooreVIEW monitoring pre-enabled**.

Year	New Nexcomm lift monitors (channel)	mooreVIEW renewal ARR added	Cumulative lifts on MV
Y1	150	\$45,000	350
Y2	400	\$120,000	750
Y3	800	\$240,000	1,550
Y5	1,500/yr run-rate	\$450,000/yr incremental	5,000+

Assumes \$25/mo mooreVIEW renewal from month of activation; Nexcomm hardware sale unchanged.

6.4 Scenario C — Combined mooreVIEW 5-year plan acceleration

Published mooreVIEW plan (all verticals): **237 → ~5,300 sites**, lift beachhead **20 → ~451 lifts** by Y5.

	Plan (standalone)	With Nexcomm MOU (directional)
Y5 lift sites	~451	2,000–5,000+ (ACE + channel)
Y5 lift software ARR	~\$135K (451 × \$300)	\$600K–\$1.5M
Wastewater Y3 revenue (plan)	\$3.9M total vertical	Lift attach accelerates beachhead

Infrastructure cost benefit: Nexcomm lake as telemetry SOR avoids mooreVIEW scaling hot Mongo to **350 GB–1.3 TB** at 5.3K sites — preserving software margin.

6.5 Revenue share framework (MOU negotiation starter)

Model	mooreVIEW	Nexcomm	Operator (ACE)
A — Referral	85% of software renewal	15% referral fee on MV renewal	Bundled in service contract
B — OEM resale	60% of software renewal	40% for hardware + cloud + billing	Wholesale monitoring markup
C — Operator-led	70% of software renewal	15% Nexcomm	15% ACE dispatch/platform fee

Example (Model B, 1,600 lifts @ \$25/mo):

Party	Annual
-------	--------

Gross software	\$480,000
mooreVIEW (60%)	\$288,000
Nexcomm (40%)	\$192,000

Nexcomm retains **hardware margin + SIM + cloud ingest** separately on all new box sales.

6.6 One-time / NRE (optional MOU exhibits)

Item	Directional
Azure MQTT fan-out + lake read integration	\$0–15K engineering (shared)
White-label Nexus UI coexistence	\$5–10K
Custom .test NRE per panel builder	\$5,000–25,000 (existing mooreVIEW OEM schedule)
ACE bulk fleet import + commissioning	\$25–50/site (operator labor, not MV license)

7. Five-year joint roadmap

Phase	Timeline	Nexcomm	mooreVIEW	Commercial
0 — MOU	Q3 2026	Data sharing terms, MQTT/lake access	ace-liftpoint-fleet , Putnam live	Revenue share letter
1 — Pilot	Q4 2026	50–200 ACE lifts, fan-out MQTT	PdM starts_analytics + CMMS WO	Case study: proactive fix before overflow
2 — Florida scale	2027	Panel-builder kit SKU	Fleet Parc, compliance export	Co-branded sell sheet
3 — Multi-tenant	2028	ADLS export per account	Lake → batch PdM at 2K+ scale	Utility + operator pricing tiers
4 — Edge AI	2029	EPI OpenWrt cooperation	MV-ST-OEM, device ONNX	Premium PdM tier
5 — National	2030	Nexcomm hardware standard	mooreVIEW default process layer on lift SKU	Definitive agreement / acquisition option

8. Competitive and market context

Competitor	Risk	Joint response
------------	------	----------------

Data Flow / Badger Meter	Merger distraction	Stable lift-first bundle during customer churn
Autodialer vendors	Low cost	Starts analytics + fleet — same hardware price band
Ignition / VTScada	IT-led utilities	Field-service pricing; PdM → CMMS native
Nexus Cloud alone	Status quo	mooreVIEW upgrades UX without rip-and-replace

mooreVIEW lift Year-1 TCO (list): ~\$2,836 vs autodialer ~**\$600–1,200** — justified by **avoided SSO** (single event often **\$10K–100K+** liability) and **monitoring contract** revenue for ACE.

9. Proposed MOU structure (term sheet outline)

For legal review — non-binding except confidentiality and exclusivity if agreed.

9.1 Purpose

Establish a strategic partnership to deliver **connected lift station monitoring with predictive maintenance and work order integration**, combining Nexcomm field infrastructure with mooreVIEW process software.

9.2 Scope

- 1. **Integration:** MQTT (Azure IoT Hub protocol), optional ADLS read, device serial registry sync
- 2. **Products:** LiftPoint Light (priority), LiftPoint, EdgePoint Industrial
- 3. **Geography:** United States; **Florida pilot exclusivity** for 12 months (negotiable)
- 4. **Channels:** ACE Septic & Waste (reference operator), Nexcomm panel builders, utilities

9.3 Responsibilities

Nexcomm	mooreVIEW
Hardware, firmware, SIM provisioning	SaaS, PdM, CMMS, HMI, .test projects
Nexus Cloud ingest + lake	Process-layer runtime + AI feature pipeline
Tier-1 device support	Tier-2 application support
Panel-builder sales training (hardware)	Operator training (PdM, CMMS, F2)

9.4 Data governance

- **Ownership:** Raw telemetry remains customer / Nexcomm account data
- **mooreVIEW access:** Read via MQTT fan-out and/or lake export; no resale of raw feeds
- **Retention:** Hot per Nexcomm policy (~72 hr Cosmos); long-term analytics via lake
- **Security:** Per-tenant isolation; BAA/SLA as required for municipal customers

9.5 Commercial terms (framework)

- Co-branded offering: "**Nexcomm Connected Lift + mooreVIEW Intelligence**" (working title)
- List software renewal: **\$25/mo/station** (mooreVIEW list)
- Revenue share: **Model B** (60/40 MV/Nexcomm on software) unless otherwise agreed
- Nexcomm may bundle software into hardware quote; remittance **monthly**, net-30
- ACE operator fee: negotiated directly with ACE / Purple Standard

9.6 IP and branding

- Each party retains existing IP
- Joint marketing requires mutual approval
- `lift_station_epi` register map derived from Nexus Cloud — license to mooreVIEW for integration purposes

9.7 Exclusivity (optional)

- **Soft exclusivity:** Nexcomm recommends mooreVIEW as preferred process layer for lift monitoring
- **Hard exclusivity (Florida, 12 mo):** No competing process-layer MOU with third party for LiftPoint Light — *in exchange for minimum lift activation commitment*

9.8 Success metrics (Year 1)

Metric	Target
Lifts on mooreVIEW (ACE + other)	≥ 200
Proactive CMMS WO from PdM (not alarm)	≥ 25 documented
SSO / overflow events avoided (case studies)	≥ 3
Panel-builder LOI	≥ 1
Combined software ARR	≥ \$60K

9.9 Term

- **Initial term:** 24 months from signature
 - **Renewal:** Auto-renew 12-month periods
 - **Termination:** 90-day notice; customer subscriptions survive on mooreVIEW SaaS terms
 - **Path to definitive agreement:** MOU contemplates good-faith negotiation of long-form OEM/ reseller agreement by **Month 12**
-

10. Open items for discussion

#	Topic	mooreVIEW position	Question for Nexcomm
1	MQTT fan-out	Required for live runtime	Can tenants subscribe to device topics, or broker mirror?
2	ADLS export	Preferred for PdM batch	Per-account read credentials + schema?
3	SIM billing	Pass-through on existing ACE SIMs	Who bills end customer for cell on retrofit?
4	Nexus Cloud coexistence	Keep for accounts that want it	White-label or parallel login?
5	CT commissioning data	hasCt flag per device	Available in Nexus device metadata?
6	Devicebound / control	Phase 2	C2D policy for mooreVIEW-initiated outputs?
7	Putnam + ACE tenant IDs	Multi-tenant SaaS	Dedicated Azure subscription or shared?
8	Exclusivity consideration	Florida pilot	What minimum commitment does Nexcomm need?

11. Recommended next steps

1. **Executive working session** — review this document; agree Scenario A vs B priority
2. **Technical workshop** — MQTT fan-out, 5-device pilot (Putnam + ACE samples), lake schema
3. **Commercial term sheet** — finalize revenue share model and ACE role
4. **Draft MOU** — legal review of §9 outline
5. **Pilot SOW** — 200 ACE lifts, 90-day PdM tune, joint case study
6. **Panel-builder kit** — Nexcomm SKU + mooreVIEW .est preloaded; co-branded PDF
