

MOOREVIEW

USPTO Trademark Summary

International Classes 9 & 42

TEAS-Ready - Searchable PDF
AI, CMMS, White-Label & Custom Equipment Systems

Document version 1.0 - June 2026
Draft for trademark counsel - not legal advice

How to use this PDF

- Copy TEAS single-paragraph blocks from Sections 3 and 4 into goods/services fields
- Search (Ctrl+F): Class 9, Class 42, CMMS, AI, white-label, specimen, MOOREVIEW
- Bullet lists summarize each section; semicolon paragraphs are filing-ready text

TEAS Field Quick Reference

Mark

MOOREVIEW

Display form

mooreVIEW (stylistic: moore + VIEW)

Mark type

Standard character mark (recommended)

Related marks

TPS CMMS, Purple Standard

Color claim

None for standard characters; or Purple #49104F if stylized

Disclaimer

Consider disclaimer of VIEW if Examiner cites descriptiveness

1. Mark Description & Specimens

Platform scope

- Integrated industrial automation, AI-enabled analytics, and maintenance-management platform
- Offered as downloadable software, embedded appliance software, and cloud SaaS
- Pre-configured or custom-built control systems under the mark
- White-label and co-branded OEM and integrator arrangements

Mark appears on

- Engineering and operator UIs
- MooreVIEW Cloud Studio
- Installers and appliance bundles
- Technical documentation and MQTT integration specs
- Equipment nameplates, enclosure labels, and HMI bezels
- System documentation on custom or white-label industrial products

2. Product & Services Overview

Core SCADA / HMI

- Structured Text (ST) programming and scan-cycle runtime
- Tag database, alarms, and I/O drivers (Modbus, MQTT, serial, API)
- HMI composer, historian, and MQTT Parc edge connectivity
- Portable .est project files

AI / PdM

- Edge AI ingest (edgeAi payloads)
- Database edge inference collection
- Time-windowed features, health index, failure forecast and RUL estimates

- Asset-to-tag mapping and nightly batch builds

CMMS

- Integrated work orders, assets, facilities, and users
- MooreVIEW CMMS Integration v1 MQTT (alarms, alarm-notify)
- Cloud tenant CMMS entitlement
- Standalone MQTT bridge to external CMMS

White-label / custom systems

- Product templates and appliance profiles
- Pre-wired driver, HMI, and ST fixtures
- Hardware badging on gateways, panels, and packaged skids
- OEM co-brand deployments

3. CLASS 9 - Goods (Copy for TEAS)

Scope

- International Class 9
- Downloadable software
- Pre-loaded hardware
- Badged custom and white-label equipment

3A. Broad - Downloadable Software

- Downloadable computer software for industrial automation, supervisory control and data acquisition (SCADA), human-machine interface (HMI) design, programmable logic controller (PLC) programming, process visualization, real-time data acquisition, alarm management, operational historian recording, computerized maintenance management (CMMS), and predictive maintenance analytics
- Downloadable computer software for artificial intelligence-based anomaly detection, edge inference ingestion, health indexing, and failure forecasting in industrial assets
- Downloadable computer software for creating work orders, managing facilities and maintenance assets, and publishing maintenance-related alarm events via message queuing telemetry transport (MQTT)
- Downloadable software development tools for structured text (ST) programming and logic validation
- Downloadable firmware integration utilities for connecting industrial edge controllers and I/O modules to a central automation platform
- Downloadable project files containing automation and maintenance configuration data

TEAS copy (single paragraph - join with semicolons):

Downloadable computer software for industrial automation, supervisory control and data acquisition (SCADA), human-machine interface (HMI) design, programmable logic controller (PLC) programming, process visualization, real-time data acquisition, alarm management, operational historian recording, computerized maintenance management (CMMS), and predictive maintenance analytics; Downloadable computer software for artificial intelligence-based anomaly detection, edge inference ingestion, health indexing, and failure forecasting in industrial assets; Downloadable computer software for creating work orders, managing facilities and maintenance assets, and publishing maintenance-related alarm events via message queuing telemetry transport (MQTT); Downloadable software development tools for structured text (ST) programming and logic validation; Downloadable firmware integration utilities for connecting industrial edge controllers and I/O modules to a central automation platform; Downloadable project files containing automation and maintenance configuration data.

3B. Hardware, Pre-Loaded & White-Label Goods

- Industrial computers, programmable automation controllers, edge gateways, and industrial control panels preloaded with software for industrial automation, SCADA, HMI, CMMS, and AI-enabled predictive maintenance
- Custom-configured industrial control systems and packaged equipment skids comprising industrial controllers, I/O modules, networking components, and embedded automation software for monitoring and controlling industrial processes
- Equipment nameplates, labels, and graphical user interface assets bearing the mark and identifying the source of embedded automation software in white-label, private-label, and custom-manufactured industrial products

TEAS copy (single paragraph - join with semicolons):

Industrial computers, programmable automation controllers, edge gateways, and industrial control panels preloaded

with software for industrial automation, SCADA, HMI, CMMS, and AI-enabled predictive maintenance; Custom-configured industrial control systems and packaged equipment skids comprising industrial controllers, I/O modules, networking components, and embedded automation software for monitoring and controlling industrial processes; Equipment nameplates, labels, and graphical user interface assets bearing the mark and identifying the source of embedded automation software in white-label, private-label, and custom-manufactured industrial products.

3C. Narrow Core (minimal filing set)

- Downloadable SCADA, HMI, CMMS, and AI-enabled predictive maintenance software for programming, monitoring, controlling, and maintaining industrial equipment
- Industrial edge gateways and control panels preloaded with such software

TEAS copy (single paragraph - join with semicolons):

Downloadable SCADA, HMI, CMMS, and AI-enabled predictive maintenance software for programming, monitoring, controlling, and maintaining industrial equipment; Industrial edge gateways and control panels preloaded with such software.

4. CLASS 42 - Services (Copy for TEAS)

Scope

- International Class 42
- SaaS and PaaS platform services
- AI analytics and CMMS services
- White-label platform and custom integration services

4A. Broad - SaaS / Platform

- Providing temporary use of non-downloadable computer software for industrial automation, SCADA, HMI design, PLC runtime execution, process visualization, real-time monitoring, alarm management, historian services, computerized maintenance management (CMMS), and AI-enabled predictive maintenance analytics
- Software as a service (SaaS) featuring software for industrial control engineering, tag and asset management, device driver configuration, remote deployment of control programs to edge devices, work order and facility management, and MQTT-based maintenance alarm integration
- Platform as a service (PaaS) featuring computer software platforms for multi-tenant industrial IoT data ingestion, edge AI inference logging, MQTT telemetry routing, and cloud-based operator and maintenance workspaces

TEAS copy (single paragraph - join with semicolons):

Providing temporary use of non-downloadable computer software for industrial automation, SCADA, HMI design, PLC runtime execution, process visualization, real-time monitoring, alarm management, historian services, computerized maintenance management (CMMS), and AI-enabled predictive maintenance analytics; Software as a service (SaaS) featuring software for industrial control engineering, tag and asset management, device driver configuration, remote deployment of control programs to edge devices, work order and facility management, and MQTT-based maintenance alarm integration; Platform as a service (PaaS) featuring computer software platforms for multi-tenant industrial IoT data ingestion, edge AI inference logging, MQTT telemetry routing, and cloud-based operator and maintenance workspaces.

4B. AI & Analytics Services

- Providing online non-downloadable software using artificial intelligence and machine learning for industrial asset health monitoring, anomaly scoring, time-series feature extraction, remaining useful life estimation, and maintenance prioritization based on SCADA historian data and edge inference results
- Data analytics services in the field of industrial equipment performance and predictive maintenance

TEAS copy (single paragraph - join with semicolons):

Providing online non-downloadable software using artificial intelligence and machine learning for industrial asset health monitoring, anomaly scoring, time-series feature extraction, remaining useful life estimation, and maintenance prioritization based on SCADA historian data and edge inference results; Data analytics services in the field of industrial equipment performance and predictive maintenance.

4C. CMMS Services

- Providing temporary use of non-downloadable computerized maintenance management system (CMMS) software for creating and tracking work orders, managing maintenance assets and facilities, assigning maintenance personnel, routing alarm notifications, and integrating operational technology (OT) alarm events from SCADA systems into maintenance workflows
- Software as a service (SaaS) featuring CMMS software integrated with industrial automation platforms

TEAS copy (single paragraph - join with semicolons):

Providing temporary use of non-downloadable computerized maintenance management system (CMMS) software for creating and tracking work orders, managing maintenance assets and facilities, assigning maintenance personnel, routing alarm notifications, and integrating operational technology (OT) alarm events from SCADA systems into maintenance workflows; Software as a service (SaaS) featuring CMMS software integrated with industrial automation platforms.

4D. White-Label, OEM & Custom System Services

- Custom configuration and integration of industrial automation, SCADA, HMI, CMMS, and AI analytics software for third-party OEMs, integrators, and end users
- Platform as a service (PaaS) and software as a service (SaaS) provided under white-label and private-label arrangements featuring industrial automation and maintenance management software
- Design and engineering of custom industrial control systems incorporating non-downloadable automation and maintenance software
- Technical support, software maintenance, and cloud hosting for the aforesaid software and platforms

TEAS copy (single paragraph - join with semicolons):

Custom configuration and integration of industrial automation, SCADA, HMI, CMMS, and AI analytics software for third-party OEMs, integrators, and end users; Platform as a service (PaaS) and software as a service (SaaS) provided under white-label and private-label arrangements featuring industrial automation and maintenance management software; Design and engineering of custom industrial control systems incorporating non-downloadable automation and maintenance software; Technical support, software maintenance, and cloud hosting for the aforesaid software and platforms.

4E. Narrow Core (combined)

- Software as a service (SaaS) featuring SCADA, HMI, CMMS, and AI-based predictive maintenance software
- Providing temporary use of non-downloadable automation and maintenance software
- Custom integration and white-label platform services for industrial control and asset maintenance systems

TEAS copy (single paragraph - join with semicolons):

Software as a service (SaaS) featuring SCADA, HMI, CMMS, and AI-based predictive maintenance software; Providing temporary use of non-downloadable automation and maintenance software; Custom integration and white-label platform services for industrial control and asset maintenance systems.

5. Attorney Cover-Sheet Summary

- Integrated industrial automation and maintenance platform: SCADA/HMI/runtime, AI-enabled predictive maintenance, and CMMS
 - AI: edge inference ingest, health indexing, failure forecasting
 - CMMS: work orders, assets, facilities, MQTT alarm-to-maintenance workflows
 - Class 9: downloadable and pre-installed software; badged hardware systems
 - Class 42: hosted multi-tenant SaaS/PaaS, AI analytics, CMMS, integration, white-label platform, custom engineering
 - Custom-configured and white-label systems: gateways, control panels, packaged equipment with mark on UI, docs, or equipment badging

6. Class 9 + 42 Coordination

MVP Suite installer

Class 9

Cloud Studio / multi-tenant

Class 42

Historian + database

Class 9 software / Class 42 hosted

Edge AI / PdM / RUL forecast

Class 9 module / Class 42 AI SaaS

CMMS work orders / assets

Class 9 embedded / Class 42 CMMS SaaS

MQTT alarm to CMMS

Class 9 publisher / Class 42 integration

IOT-LINK / Opta appliances

Class 9 preloaded / Class 42 hosting

White-label OEM systems

Class 9 badged hardware / Class 42 white-label SaaS

Custom control panels / skids

Class 9 goods / Class 42 engineering

7. Specimen & First-Use Checklist

Cl. 9 software

Installer, package metadata, download page with mark

Cl. 9 hardware

Nameplate or HMI bezel photo; appliance datasheet

Cl. 9 white-label

OEM agreement; dual-brand label; About screen

Cl. 42 SaaS

Cloud login + Studio dashboard

Cl. 42 CMMS

Work orders / assets UI in MooreVIEW shell

Cl. 42 AI / PdM

Historian PdM chart / failure forecast UI

Cl. 42 white-label

Integrator SOW or white-label partner agreement

8. Optional Related Classes

Class 37

On-site installation/service of custom control systems

Class 35

SaaS subscription retail under the mark

Class 41

Training services under the mark
